De Lee's New Obstetrics

You will pronounce this new book the most elaborate, the most superbly illus-
trated work on Obstetrics you have ever seen. Especially will you value the
913 illustrations, all, with but few exceptions, original and the best work of
leading medical artists. Some 150 of these illustrations are in colors. Such
a magnificent collection of obstetric pictures—and with *really practical value*—
has never before appeared in one book.

Diagnosis is featured, and the relations of obstetric conditions and accidents to
general medicine, surgery, and the specialties brought into prominence.

Regarding *Treatment*: You get here the very latest advances in this field, and
you can rest assured every method of treatment, every step in operative technic,
is just right.

Worthy of your particular attention are the descriptive legends under the
illustrations. These are unusually full, and by studying the pictures serially
with their detailed legends you are better able to follow the operations than by
referring to the pictures from a distant text—the usual method.

Large octavo of 1069 pages, with 913 illustrations, 150 in colors. By JOSEPH B. DE LEE,
M. D., Professor of Obstetrics, Northwestern University Medical School, Chicago. Cloth,
\$8.00 net; Half Morocco, \$9.50 net.
